Outline

- 1 Preparing New Material
- 2 Integrating with Rest of Course
- 3 Building Presentations

What we want to introduce

- How to add new chapters
- Copying template files
- Configuring templates
- Adding frames to body
- Integrating with other chapters

How course material is generated

- Slides, Handout, Article versions
 - Delivered as pdf files
 - Generated using LaTeX and beamer
 - Free tools for multiple platforms
- Video, iPhone versions
 - Prepared with Camtasia Studio
 - Commercial Product

Make New Directory

- Create new top-level directory
- Do not use spaces in directory name
- All material for chapter should go there
 - documents
 - programs
 - images

Files stored in `template` directory

- Do not edit files in template directory
- Copy required files to new chapter directory

Files to copy

`Makefile` do not modify
`chapter.tex` only required by me
`standalone.tex` add title and subtitle
`body.tex` edit to taste
`article.tex` do not modify
`handout.tex` do not modify
`slides.tex` do not modify

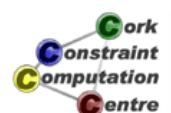

Changing `standalone.tex`, e.g.

```
\title[Adding Material] %  
{Chapter A1: Adding Material}
```

Modifying author

- By default, the author is H. Simonis at 4C (me!)
- You can add `author` and `institute` fields

Changing `standalone.tex`, e.g.

```
\author{Frodo Baggins}  
\institute{Free University of Gondor\  
Hobbiton\  
The Shire}  
\title[Adding Material] %  
{Chapter A1: Adding Material}
```

Edit `body.tex`

- Add frames and text of presentation
- Read *beamer* documentation
- Or use other chapter as examples

Labels

- Use consistent label names
- Start names with `dir`:
- Using the directory name of the chapter

Filenames

- Load filenames with `../dir/` prefix
- This allows to make document from another subdirectory

Versions

- Distinguish materials for multiple targets
- Text between slides is only used in `article` version
- Use animation only in `beamer` version
- Have summary pictures in `handout` version
- Use mode `all` if material is used everywhere
- Mark frames as `<presentation>` not needed for article

Other Files to Update

- Central `Makefile`
- Central `index.htm`
- `introduction` chapter

Central Makefile

- Add new directory to list at top of Makefile
- CHAPTERS = introduction first...

Central index.htm

- Add line to *Chapters* and/or *Applications* part
- Easiest to copy existing entry
- Possibly renumber chapters

Extend introduction Chapter

- Edit `body.tex` in `introduction` chapter
- Add entry to chapters and/or application tables in *Chapter Overview* section
- Add new frame for chapter in *Chapter Detail* section

Building Presentations

- Run `make` in new directory
- This builds
 - `article.pdf` text format
 - `handout.pdf` 2 slides per page for printing
 - `slides.pdf` all slides
- Copy to destination
